

## CONDOTTI

design Emanuela Garbin - Mario Dell'Orto  
2008

Trunk desk. Stripwood structure covered in leather with bas-relief pattern. Aluminum trim and joints in die-cast metal covered in leather. Inside mirror wall surfaces. Some interior shelves are covered in leather, some are in santos-rosewood veneer, and some are in steel. Pull-out desktop in santos-rosewood, 3 Leds and sensors. Leather handles with chrome-plated structure.

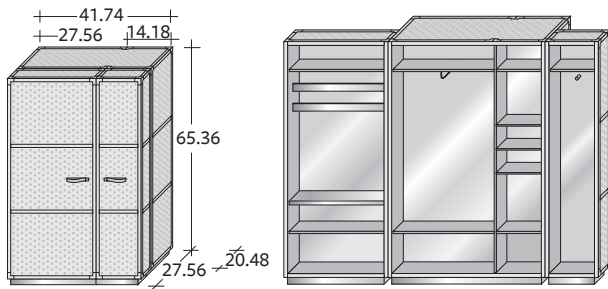

Round night table with two or three fully-extractible drawers with a return mechanism and birch-wood interior finish. MDF structure covered in leather. Handles with brushed burnished finish.

Dressing table consisting of: side units in stripwood covered in leather, aluminum trim and joints in die-cast metal covered in leather; central part with flip-over top in MDF wood with santos-rosewood veneer and a mirror. The flip-over top is connected to the central part thanks to an aluminum mechanism which allows its rotation, facilitating the flip-over and slowing down the closing. The special veneering process is called 'folding' and this allows a single continuous sheet to be used on the upper part and on the front edge without interruptions. Extractable and sliding tray in steel covered in leather (the same color as the side units). The right side unit is complete with a door; the internal structure is black and there are two shelves covered in leather (the same color as the side units). Fitted to the door are two small trays in polished steel. The left side unit is complete with three total extraction drawers with matt black interior finish and return mechanism. Leather handles with chrome-plated structure.
