

LILIA

design Steve Leung
2020

Lilia is a swivel armchair (360°), with a soft, functional shape which seems to have originated naturally from a flower that has just blossomed. The backrest softly envelopes the seat, and the asymmetry of the two armrests gives the design an original and contemporary touch. A project that gives hints of stylish design thanks to the cover, which is available in a range of fabrics and leathers with the option of choosing two colours: one for the external part of the backrest, and another for the internal part of the armchair and for the seat.
